MOVACY by Zitec

Out-Of-Home Solutions Suite

At the crossroads of cutting-edge technology and deep logistics expertise, Movacy by Zitec introduces a next-generation Out-Of-Home (OOH) Solution Suite. Built for flexibility, scalability, and seamless integration, Movacy is designed to revolutionize smart locker operations and delivery workflows with efficiency and precision.

Why **Movacy** by Zitec?

- Proven understanding of logistics business models and delivery workflows
- Direct alignment with operational needs and pain points
- Support from Zitec's team of over 350 tech professionals
- A fully hardware-independent solution already tested and proven at scale

- Significant savings on deployment costs and timelines
- Development teams with extensive industry expertise in logistics and operations
- A clear focus on creating long-term value for partners
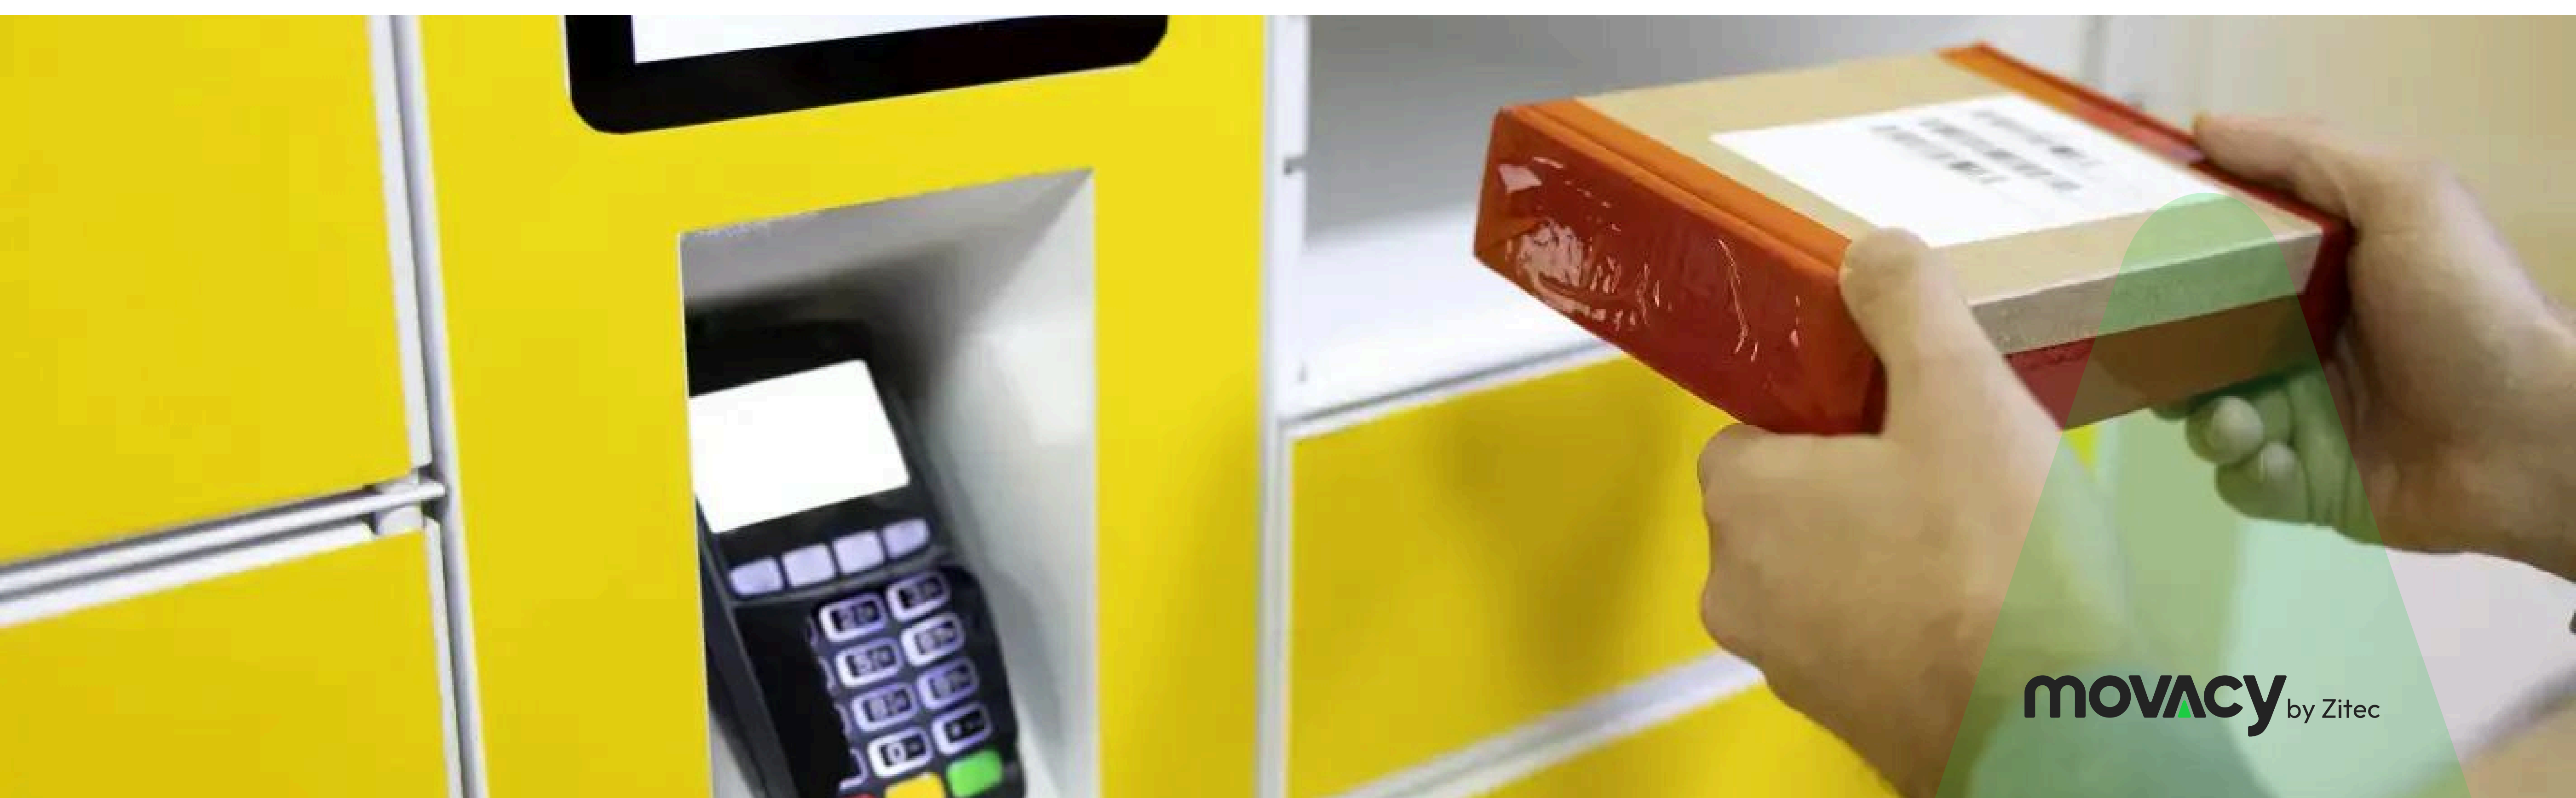

Scalable, Hardware-Agnostic Infrastructure

Movacy is a truly hardware-agnostic platform, currently operating across **7,000+** lockers in 3 countries. It integrates effortlessly with leading smart locker hardware providers such as KEBA, ModernExpo, SmartID, and Rovenma and includes more than **3,000** KEBA units already in operation on the ground.

No need for hardware replacements	Fast, cost-effective deployment	Compatible with most locker systems

This significantly reduces the upfront investment and operational complexity typically associated with other platforms.

MOVACY by Zitec

Deep Expertise in Last-Mile Logistics

With a team of over **130 specialists** and **8+ years** of hands-on experience in last-mile logistics, smart locker operations, and platform development, Movacy offers you a solution refined through real-world success. Trusted by major players like SAMEDAY, our expertise helps you streamline operations, accelerate deliveries, and scale your courier network with confidence.
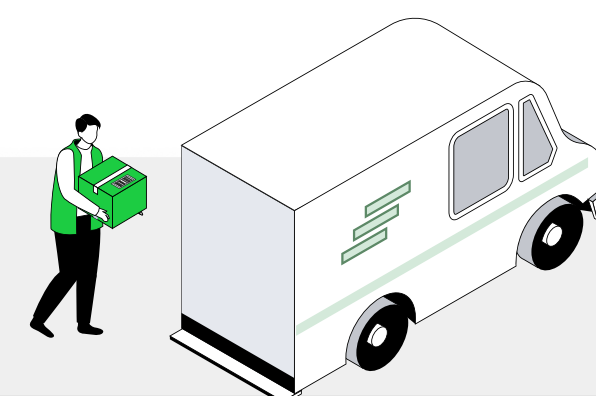

Modular Solution with Enterprise-grade Capabilities

Movacy isn't just a locker platform. It is an ecosystem designed to streamline every aspect of your OOH operations, including:
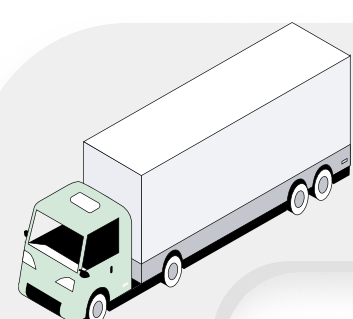

1

Smart Locker Platform
The application operating locally on the locker that can be seamlessly integrated with any delivery core platforms. It supports comprehensive parcel handling and operational workflows, including first-mile processing, parcel loading and unloading, and consolidation. Additionally, it enables parcel delivery and return services, covering C2C shipments, courier deliveries, returns management, as well as parcel redirection and issue resolution.

2

Smart Locker Management Platform
A centralized dashboard offering real-time visibility, error reporting, and administrative control over the locker network.

3

Remote Management Platform
A robust solution for managing software and hardware remotely, including application monitoring, system diagnostics, and full remote control of deployed devices.

4

API-First Design
Built with an API-first approach, Movacy easily integrates with internal systems, minimizing IT overhead and ensuring fluid operational workflows.

5

PUDO Mobile App
Empowers store and station staff to manage interactions with clients and couriers, featuring authentication, delivery/return handling screens, reporting and settings panels.

Flexible, Growth-Friendly Pricing Model

Whether scaling to a few locations or building a nationwide network, Movacy's flexible pricing supports your ambitions without overwhelming your budget. It's the smart choice for growing your OOH infrastructure sustainably.

Key Features and Differentiators

Engineered for Scale

- Purpose-built for expansive locker networks with real-time synchronization.
- Fast deployment: complete locker setup in as little as 15–30 minutes.
- Full POS system compatibility and flexible internet connectivity.
- Seamless security camera integration for enhanced on-site monitoring.

Operational Excellence

- Dynamic workflow customization without coding.
- Robust reverse logistics and smart parcel consolidation features.
- Multilingual interfaces with localized billing and payments.
- Cloud-native infrastructure ensuring 24/7 availability and automated failover.
- 99.98% uptime ensures your operations stay uninterrupted.

Future-Ready Innovations

- Preparing for **EEA25** standards, offline functionality, and box rental services.
- Integration-ready for advertising systems, boosting customer engagement.
- Anti-theft alerts and offline locker alert systems enhance operational security.
- Customizable UI to reflect your brand and offer intuitive user experiences.
- Role-based access controls, encryption, and compliance modules ensure regulatory adherence.

Smart Support and Management

- Full remote management capabilities, including system restarts and diagnostics.
  Real-time preventive error alerts and proactive maintenance dashboards.
- Tailored training for installation and maintenance teams to maximize autonomy and efficiency.

Built for Agility

Movacy is developed using agile methodologies, allowing rapid rollout of new features and adjustments based on market needs, regulations, and user feedback. Our senior-level software specialists bring deep logistics knowledge to every project, ensuring Movacy evolves with you. **Let's build tomorrow's logistics together!**

Technology delivered

Movacy is an advanced software solution designed to help courier and postal service organizations optimize their operations at every level. The platform enables intelligent management of delivery fleets, geographic zones, logistics networks, including lockers and PUDO points, shippers, couriers and delivery routes.

Additionally, it automates essential processes such as first-mile allocation, last-mile routing, sorting, and consolidation, enhancing efficiency and ensuring seamless scalability.

Developed by Zitec, a trusted partner in digital transformation with over 21 years of experience in enabling digital transformation with an impact, Movacy empowers businesses with cutting-edge solutions for the future of logistics.
